PERSONAL PROJECTS

Forum Website. Designed an interactive web application where users can submit questions and receive answers, while fellow users can assist by offering solutions. Developed using Node.js and the Pug template engine,with MongoDB serving as the database.

Food Delivery Website. Developed a platform that enables users to explore a variety of food options offered by different restaurants within a defined radius. Users have the capability to select their preferred dishes, add them to a cart, and proceed with ordering. This platform was built using Node.js and the Pug template engine, with MongoDB serving as the database.
